- VII. For any resubmissions, submit the electronic filing using the Form 1 Submission Software and an original and six (6) conformed paper copies of the entire form, as well as the appropriate number of copies of the subscription statement indicated at instruction III (a). Send the resubmissions to the address indicated at instruction III (a).
- VIII. Do not make references to reports of previous years or to other reports in lieu of required entries, except as specifically authorized.

## **SUPERIOR WATER, LIGHT AND POWER COMPANY**

### Notes to Financial Statements

#### **1. Summary of Significant Accounting Policies**

##### **General**

The Company is a wholly-owned subsidiary of ALLETE, Inc. (Parent) and provides electric, gas and water services to customers in Superior, Wisconsin and the surrounding area. The Company is subject to regulation by the Public Service Commission of Wisconsin (PSC) and reporting by the Federal Energy Regulatory Commission (FERC). The Company's accounting policies conform to accounting principles generally accepted in the United States of America as applied in the case of regulated public utilities and are in accordance with the accounting requirements of the regulatory authorities having jurisdiction.

The Company prepares its financial statements in accordance with accounting principles generally accepted in the United States of America, which require management to (1) make estimates and assumptions that affect the reported amounts of assets and liabilities, (2) disclose contingent assets and liabilities at the date of the financial statements and (3) report amounts of revenue and expenses during the reporting period. Actual results could differ from those estimates.

##### **Utility Plant and Depreciation**

Utility plant is stated at original cost as defined for regulatory purposes. The cost of additions to utility plant and replacements of retirement units of property are capitalized. Maintenance costs and replacements of minor items of property are charged to expense as incurred. Additions to utility plant include direct costs, allocable overhead costs and allowance for funds used during construction (AFDC). Costs of depreciable units of utility plant retired are eliminated from the plant accounts and such costs, net of removal costs and salvage proceeds, are charged to accumulated depreciation.

Pursuant to requirements of the PSC, contributions in aid of construction (CIAC) at December 31, 1989 is included as a separate component of utility plant and amortized over a 15 year period, which represents the estimated remaining useful life of the corresponding property. Amortization of the pre-1990 CIAC reduces depreciation expense. CIAC received subsequent to December 31, 1989 is recorded as a direct reduction of utility plant. Most CIAC relates to customer advances which are not refunded.

Depreciation for financial statement purposes is computed using straight-line rates approved by the PSC and, in the prior year, supplemental annual provisions ordered by the PSC.

##### **Revenues**

Revenues are based on cycle billings rendered to customers monthly. In accordance with PSC regulations, the Company accrues electric, gas and water revenue for service provided but not yet billed.

The Company's electric rates contain a power cost adjustment clause which provides for a billing adjustment based on the amount by which the cost of purchased power for the previous month is more or less than the base level in the approved rate schedules. Similarly, gas rates contain a purchased gas adjustment clause which allows the Company to adjust customer billings for the difference between actual gas costs and amounts included in approved rates.

### Income Taxes

The Company is included in the consolidated federal income tax return of the Parent. The tax provision for the Company is calculated based on an agreement with the Parent which allocates taxes to the Company as if it filed a separate tax return using the marginal tax rate of the consolidated group for federal income tax purposes. Deferred taxes are provided on temporary differences between the book and tax basis of assets and liabilities which will have a future impact on taxable income. Income taxes are allocated between operating income and other income based on the source of the income that generated the tax. Investment tax credits for utility property are deferred and amortized over the service life of the related property.

### Deferred Regulatory Charges and Credits

The Company is subject to the provisions of Statement of Financial Accounting Standards No. 71, „Accounting for the Effects of Certain Types of Regulation.“ Deferred regulatory charges and credits represent income taxes recoverable and refundable in future utility rates.

### Unamortized Debt Expense

Debt issuance costs are deferred and amortized over the lives of the related issues.

### Cash and Cash Equivalents

The Company considers all investments purchased with original maturities of three months or less to be cash equivalents.

### Inventory

Inventory, which consists of materials and supplies, is stated at the lower of cost or market. Cost is determined by the average cost method.

### Reclassifications

Certain prior year amounts have been reclassified to conform to current year presentation.

## 2. Rate Case

During 1999, the Company filed for rate adjustments with the PSC requesting annual rate increases for its gas and water customers and a rate decrease for its electric customers. The rate case was approved on September 11, 2001 with an effective date of September 12, 2001. The approved rate case provided for annual rate increases of 1.47% and 24.53% for the Company's gas and water customers, respectively, and a rate decrease of 3.40% for its electric customers.

## 3. Major Customers

During 2001 and 2000, revenues derived from one customer were \$4,944,748 and \$4,584,473, respectively. No other customer accounted for more than 10% of total revenues.

## 8. Retirement and Other Benefit Plans

### Defined Benefit Plan

The Company has non-contributory defined benefit pension plans covering substantially all employees. Pension benefits are fully vested after five years and are based on years of service and the highest average monthly compensation earned during four consecutive years within the last 15 years of employment. The pension income was \$488,908 in 2001 and \$411,904 in 2000. Company policy is to fund accrued pension costs, including amortization of past service costs. A portion of pension cost is capitalized as a cost of plant construction.

The Company's plans are combined with that of its Parent. As a result, the disclosure information required by Statement of Financial Accounting Standards No. 132, „Employers' Disclosures About Pension and Other Postretirement Benefits,“ is not separately determined for the Company. At December 31, 2001 and 2000, the market value of the assets of the combined pension plans exceeded the actuarially computed value of the projected benefit obligation. Plan assets are invested primarily in publicly traded equity and fixed income securities. At December 31, 2001 and 2000, approximately 10% and 10%, respectively, of combined plan assets were invested in the Parent's common stock.

### Employee Stock Ownership Plan

Company employees participate in the Parent's Employee Stock Ownership Plan (ESOP) sponsored by its Parent. The ESOP was amended in 1989 and 1990 to establish two leveraged employee stock ownership accounts. The 1989 ESOP account, which was leveraged with a \$16.5 million loan payable by the ESOP to a third party, covers all Parent and Company non-union employees who work more than 1,000 hours per year and have one year of service. The 1990 ESOP account covers Parent and Company employees who were participants in the non-leveraged ESOP plan prior to August 4, 1989. The 1990 ESOP account was leveraged by a \$75 million loan payable by the ESOP to the Parent (Employer Loan).

The Company's Parent accounts for the ESOP in accordance with Statement of Position 93-6 issued by the American Institute of Certified Public Accountants. None of the ESOP debt, receivable for the Employer Loan or unallocated shares pledged as collateral for the loans have been pushed down from the Parent to the Company's financial statements.

The Company's compensation and interest expense related to the ESOP and allocated from the Parent totaled \$196,765 in 2001 and \$200,467 in 2000.

### Postretirement Benefits

The Company provides certain health care and insurance benefits for retired employees. Substantially all employees may become eligible for such benefits if they attain retirement status. The Company's benefits are combined with those of its Parent. As a result, the disclosure information required by Statement of Financial Accounting Standards No. 132, „Employers' Disclosures About Pension and Other Postretirement Benefits,“ is not separately determined for the Company. The Company's expense related to postretirement benefits and allocated from the Parent totaled \$376,211 and \$436,440 in 2001 and 2000, respectively.

### Performance Share Awards

Key employees of the Company participate in the Parent's Long-Term Incentive Compensation Plan (the Plan). Under the Plan, performance shares of the Parent's common stock are earned over multi-year time periods and are contingent upon the attainment of certain performance goals of the Parent. The Company does not reimburse the Parent for the shares issued to employees. As such, additional paid in capital is credited when the shares are ultimately issued for the amount of expense accrued under the Plan.

## 9. Related Parties

The Company purchases all of its electric power from its Parent under an Interchange Service Agreement which provides for the Parent to supply the Company with its total electric requirements at rates approved by FERC. The Interchange Service Agreement expires December 31, 2010. Purchases under the Service Agreement were approximately 18,641,000 and \$17,680,000 in 2001 and 2000, respectively.

The Parent performs certain maintenance and administrative services for the Company. The cost of these services were approximately \$778,000 and \$700,000 in 2001 and 2000, respectively.

The Company provides contract labor and electric transmission rental services to the Parent. Billings for these services were approximately \$769,000 and \$705,000 in 2001 and 2000, respectively.

Beginning in 1999, an affiliate of the Parent managed the Company's water plant. The Company paid management fees of approximately \$968,000 and \$198,000 in 2001 and 2000, respectively. Additionally, the Company provides contract labor to the affiliate. Such billings were approximately \$468,000 and \$128,000 in 2001 and 2000, respectively.

**GENERAL DESCRIPTION OF CONSTRUCTION OVERHEAD PROCEDURE**

1. For each construction overhead explain: (a) the nature and extent of work, etc. the overhead charges are intended to cover, (b) the general procedure for determining the amount capitalized, (c) the method of distribution to construction jobs, (d) whether different rates are applied to different types of construction, (e) basis of differentiation in rates for different types of construction, and (f) whether the overhead is directly or indirectly assigned.
2. Show below the computation of allowance for funds used during construction rates, in accordance with the provisions of Electric Plant instructions 3(17) of the U.S. of A.
3. Where a net-of-tax rate for borrowed funds is used, show the appropriate tax effect adjustment to the computations below in a manner that clearly indicates the amount of reduction in the gross rate for tax effects.

A percentage allocated to construction was determined based on judgement as well as time, of the amount of salary, office expenses and other amdinistrative expenses which is allocable to construction. The yearly amount for 2001 was equal to 8% of direct costs of construction additions charged to work in progress monthly and credited to this account.

Payroll taxes and employee benefits are allocated based on the actual labor dollars processed through the monthly labor distribution. For purchased additions such as meters, transformers, autos, etc., as well as construction work by contractors, zero is applied to construction work in progress or credited to this account.

**COMPUTATION OF ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION RATES**

For line 1(5), column (d) below, enter the rate granted in the last rate proceeding. If such is not available, use the average rate earned during the preceding three years.

1. Explain in a footnote any important adjustments during year.
2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.
3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.
4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.

**PURCHASED POWER (Account 555)**  
(Including power exchanges)

1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.
2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.
3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:

RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.

LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.

IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.

SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.

LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.

IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.

EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.

OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.

(Including power exchanges)

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.
5. For requirements RQ purchases and any type of service involving demand charges imposed on a monthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.
6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.
7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.
8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. - Report in Section 8 the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.
- Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year.  
Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used.  
In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used.  
For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.
- If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.

**TRANSMISSION LINE STATISTICS**

- Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.
- Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
- Report data by individual lines for all voltages if so required by a State commission.
- Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
- Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction. If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
- Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

**TRANSMISSION LINE STATISTICS (Continued)**

7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)
8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.

### ENVIRONMENTAL PROTECTION FACILITIES

1. For purposes of this response, environmental protection facilities shall be defined as any building, structure, equipment, facility, or improvement designed and constructed solely for control, reduction, prevention or abatement of discharges or releases into the environment of gaseous, Liquid, or solid substances, heat, noise or for the control, reduction, prevention, or abatement of any other adverse impact of an activity on the environment.
2. Report the differences in cost of facilities installed for environmental considerations over the cost of alternative facilities which would otherwise be used without environmental considerations. Use the best engineering design achievable without environmental restrictions as the basis for determining costs without environmental considerations. It is not intended that special design studies be made for purposes of this response. Base the response on the best engineering judgment where direct comparisons are not available. Include in these differences in costs the costs or estimated costs of environmental protection facilities in service, constructed or modified in connection with the production, transmission, and distribution of electrical energy and shall be reported herein for all such environmental facilities placed in service on or after January 1, 1969, so long as it is readily determinable that such facilities were constructed or modified for environmental rather than operational purposes. Also report similar expenditures for environmental plant included in construction work in progress. Estimate the cost of facilities when the original cost is not available or facilities are jointly owned with another utility, provided the respondent explains the basis of such estimations. Examples of these costs would include a portion of the costs of tall smokestacks, underground Lines, and landscaped substations. Explain such costs in a footnote.
3. In the cost of facilities reported on this page, include an estimated portion of the cost of plant that is or will be used to provide power to operate associated environmental protection facilities. These costs may be estimations on a percentage of plant basis. Explain such estimations in a footnote.
4. Report all costs under the major classifications provided below and include, as a minimum, the items Listed-hereunder:
 

<b>A. Air pollution control facilities:</b> (1) Scrubbers, precipitators, tall smokestacks, etc. (2) Changes necessary to accommodate use of environmentally clean fuels such as Low ash or low sulfur fuels including storage and handling equipment (3) Monitoring equipment (4) Other.	<b>D. Noise abatement equipment:</b> (1) Structures (2) mufflers (3) Sound proofing equipment (4) Monitoring equipment (5) Other.
<b>B. Water pollution control facilities:</b> (1) Cooling towers, ponds, piping, pumps, etc. (2) Waste water treatment equipment (3) Sanitary waste disposal equipment (4) Oil interceptors (5) Sediment control facilities (6) Monitoring equipment (7) Other.	<b>E. Esthetic costs:</b> (1) Architectural costs (2) Towers (3) Underground lines (4) Landscaping (5) Other.
<b>C. Solid waste disposal costs:</b> (1) Ash handling and disposal equipment (2) Land (3) Settling ponds (4) Other.	<b>F. Additional plant capacity necessary due to restricted output from existing facilities, or addition of pollution control facilities.</b> <b>G. Miscellaneous:</b> (1) Preparation of environmental reports (2) Fish and wildlife plants included in Accounts 330, 331, 332, and 335. (3) Parks and related facilities (4) Other.
5. In those instances when costs are composites of both actual supportable costs and estimates of costs, specify in column (f) the actual costs that are included in column (e).
6. Report construction work in progress relating to environmental facilities at Line 9.

Line No.	Classification of Cost (a)	CHANGES DURING YEAR			Balance at End of Year (e)	Actual Cost (f)
		Additions (b)	Retirements (c)	Adjustments (d)

5	Esthetic Costs					
6	Additional Plant Capacity					
7	Miscellaneous (Identify significant)					
8	TOTAL (Total of lines 1 thru 7)				472,800	
9	Construction Work in Progress					

1. Show below expenses incurred in connection with the use of environmental protection facilities, the cost of which are reported on Page 430. Where it is necessary that allocations and/or estimates of costs be made, state the basis or method used.
2. Include below the costs incurred due to the operation of environmental protection equipment, facilities, and programs.
3. Report expenses under the subheadings listed below.
4. Under Item 6 report the difference in cost between environmentally clean fuels and the alternative fuels that would otherwise be used and are available for use.
5. Under Item 7 include the cost of replacement power, purchased or generated, to compensate for the deficiency in output from existing plants due to the addition of pollution control equipment, use of alternate environmentally preferable fuels or environmental regulations of governmental bodies. Base the price of replacement power purchased on the average system price of purchased power if the actual cost of such replacement power is not known. Price internally generated replacement power at the system average cost of power generated if the actual cost of specific replacement generation is not known.
6. Under item 8 include ad valorem and other taxes assessed directly on or directly relatable to environmental facilities. Also include under Item 8 licensing and similar fees on such facilities.
7. In those instances where expenses are composed of both actual supportable data and estimates of costs, specify in column (c) the actual expenses that are included in column (b).

## OPERATING REVENUES FROM NATURAL GAS UTILITY

1. Report data by rate schedule (including unbilled revenues and therms), classified between space heating and non-space heating customers. Customer counts are based on the average number of meters in service - using 12 month end figures. Where meters are combined for billing purposes, each combined group of meters counts as one customer.			
2. For industrial interruptible sales, report data by priority of interruption.			
3. Report all data for transportation customers even if they are already included in Accounts 480-484. Classify these by rate schedule in the same detail as reported in Accounts 480-484.			
4. For the remaining other operating revenues, report details of major items and then group the remaining items in each account. Report the name of lessee and description of property for major items of rent revenue.

## GAS STORED (ACCOUNTS 117, 164.1, 164.2, and 164.3)

<p>1. If during the year, adjustment was made to the stored gas inventory (such as to correct cumulative inaccuracies of gas measurements), furnish in a footnote an explanation of the reason for the adjustment, the MCF and dollar amount of adjustment, and account charged or credited.</p> <p>2. Give in a footnote, a concise statement of the facts and the accounting performed with respect to any encroachment of withdrawals during the year, or restoration of previous encroachment, upon native gas constituting the "gas cushion" of any storage reservoir.</p> <p>3. If the company uses a "base stock" in connection with its inventory accounting, give a concise statement of the basis of establishing such "base stock" and the inventory basis and the accounting performed with respect to any encroachment of withdrawals upon "base stock," or restoration of previous encroachment, including brief particulars of any such accounting during the year.</p>		<p>4. If the company has provided accumulated provision for stored gas, which may not eventually be fully recovered from any storage project, furnish a statement showing: (a) date of FERC authorization of such accumulated provision, (b) explanation of circumstances requiring such provision, (c) basis of provision and factors of calculation, (d) estimated ultimate accumulated provision accumulation, and (e) a summary showing balance of accumulated provision and entries during the year.</p> <p>5.
